

Quick notes

Meeting Aug 31, 2026 at 20:31 EDT

Sep 1, 2026

Infrastructure setup, catalog functionality, and project security protocols were reviewed to define operational requirements.

Domain and Hosting

- The client confirmed they will host parts.diamond.com through their existing GoDaddy account.
- OVH will provide infrastructure hosting, while domain registration and SSL management remain independent.

Portal Configuration

- Established the requirement for a segregated email address, parts@druffdiamond.com, for portal operations.

Search and Data Functionality

- Search functionality will prioritize part numbers and model identifiers; description-based search is excluded due to complexity.
- The system must alert users to distinguish between brands if a part number matches multiple entries.
- The database will record historical pricing via start and end dates to enable margin analysis.
- Pricing data must be viewable in 3 distinct currencies, specifically including USD and SDK.
- The 'Intello catalog' column within the provided project CSV is currently undefined with no known significance.

Security and Backup

- Incident response documentation requires simplification to ensure clarity for general, non-technical users.
- OVH serves as the primary layer for backup and recovery operations.

Next steps

- ☐ [Athif Shaffy] Contact OVH Pricing: Contact OVH to obtain an exact cost estimate for the hosting portal.
- ☐ [Deepshika Ghale] Organize Project Documents: Create a Google Drive folder and centralize all relevant project documents into it for easy access.

- ☐ [The group] Create User Instructions: Develop tutorial and instruction documentation to guide users on how to place orders through the portal.
- ☐ [Athif Shaffy] Revise Security Documentation: Update the cyber security incident response documentation to include more detailed and understandable guidance for general users.
- ☐ [Deepshika Ghale] Create Portal Email: Register the segregated email address parts@druffdiamond.com to be used specifically for the parts portal.

Meeting Aug 31, 2026 at 20:31 EDT

Meeting records  Transcript  Recording

Summary

Infrastructure setup, catalog functionality, and project security protocols were reviewed to define operational requirements.

Infrastructure and Repository Strategy

Team members confirmed GoDaddy hosting for domains and established a dedicated email for project communications. A private repository was created to manage the initial development phase.

Catalog and Pricing Features

System search functionality will prioritize part numbers and model identifiers to avoid descriptive ambiguity. Pricing must support 3 currencies and track historical data for margin analysis.

Security and Operational Planning

Decision made to implement an incident response plan covering credential resets and data restoration. Instructions for portal users must be documented before system launch.

Decisions

Aligned

- **System subdomain hosting location defined** The parts portal subdomain (parts.diamond.com) will be hosted on the client's existing GoDaddy infrastructure rather than through OVH.
- **Dedicated portal email address created** A new, dedicated email address will be created specifically for the parts portal to ensure account segregation, replacing the use of personal project emails.
- **Duplicate part number search strategy defined** The system will display a prompt to the user when a searched part number corresponds to multiple brands, requiring the user to clarify which brand they are looking to purchase.
- **Incident response ownership established** The responsibility for cybersecurity incident response will be explicitly assigned and documented before the portal goes live, rather than defined during an incident.

Next steps

- ☐ [Athif Shaffy] Contact OVH Pricing: Contact OVH to obtain an exact cost estimate for the hosting portal.
- ☐ [Deepshika Ghale] Organize Project Documents: Create a Google Drive folder and centralize all relevant project documents into it for easy access.
- ☐ [The group] Create User Instructions: Develop tutorial and instruction documentation to guide users on how to place orders through the portal.
- ☐ [Athif Shaffy] Revise Security Documentation: Update the cyber security incident response documentation to include more detailed and understandable guidance for general users.
- ☐ [Deepshika Ghale] Create Portal Email: Register the segregated email address parts@druffdiamond.com to be used specifically for the parts portal.

Details

- **Domain and Hosting Infrastructure:** Deepshika Ghale and Athif Shaffy discussed the domain name configuration, establishing that `parts.diamond.com` can be hosted within GoDaddy alongside the existing `diamond.com` domain, though OVH remains an alternative option (00:00:01). Athif Shaffy clarified that OVH provides hosting services but typically does not provide domain services. They confirmed that the SSL and domain configurations will be handled by the team, and there are no associated costs for these specific items (00:01:29).
- **GitHub Repository and Communication Email:** Deepshika Ghale confirmed the creation of a private GitHub repository using their personal `roughdiamond` email address, noting that this approach is free at their current project scale (00:01:29). Following a suggestion from Andreas, they plan to create a dedicated email address, `parts@druffdiamond.com`, to segregate communications specifically for the parts portal (00:02:42).
- **Project Phase 1 and Documentation Management:** Deepshika Ghale and Athif Shaffy addressed the scope of the project, confirming that "Phase 1" focuses on the development of the parts portal (00:02:42). Athif Shaffy requested that Deepshika Ghale organize the various instruction PDFs and project documents into a centralized Google Doc or folder to better manage information (00:05:09).
- **Parts Catalog Search Functionality:** Regarding the database structure, Deepshika Ghale and Athif Shaffy discussed search functionality within the catalog. They agreed that searching by part number and model is the most effective approach, as relying on descriptions may lead to complications due to similar wording (00:06:42). They established a protocol for instances where multiple brands share the same part number; when a user searches for a part number associated with multiple brands, the system should prompt them to select the correct brand to ensure the intended item is purchased (00:08:18).
- **Pricing Features and Analysis:** Deepshika Ghale outlined requirements for displaying prices in three currencies: USD, SEK, and CAD. They discussed the need to track price history by recording the start date and end date for pricing

updates, which will allow for future analysis of price hikes and margin increases ([00:09:42](#)). Additionally, they addressed a column in the provided detailed CSV file from the Intel catalog that remains undefined, concluding that while it can be included, it holds no current significance ([00:11:12](#)).

- **Cybersecurity and Incident Response:** The discussion covered cybersecurity and data management protocols, specifically regarding "accidental damage" such as incorrect bulk updates or data deletions ([00:11:12](#)). They reviewed an incident response plan, which includes containing the incident, identifying the timeframe of the breach, resetting credentials, and restoring data from a known good backup. Deepshika Ghale emphasized that these procedures should be understandable for a general user and noted that the party responsible for responding to incidents must be identified before the portal goes live ([00:12:35](#)).
- **OVH Hosting Costs and User Training:** Andreas requested the creation of instructional documents to assist users with placing orders and navigating the portal. To determine the exact annual operating costs for the OVH cloud, Deepshika Ghale requested that Athif Shaffy contact OVH to obtain precise figures, and Athif Shaffy agreed to perform this task ([00:14:07](#)).

You should review Gemini's notes to make sure they're accurate. [Get tips and learn how Gemini takes notes](#)

Meeting Aug 31, 2026 at 20:31 EDT - Transcript

00:00:01

Athif Shaffy: So yeah, I'm transcribing. Maybe I can record. And this is Yeah, you can continue.

Deepshika Ghale: Okay. So, this was the document that we had sent out to them uh for

Athif Shaffy: Yeah.

Deepshika Ghale: all of this. He just wanted to know if we are going to need like if all of this is going to be included with the OVH or not. And

Athif Shaffy: So domain name.

Deepshika Ghale: then

Athif Shaffy: Yeah. So what did you say? I mean what did you say for

Deepshika Ghale: for this one what I said was because they already have the r

Athif Shaffy: this?

Deepshika Ghale: ofdiamond.com so they can and they host it in godaddy. So they can have parts.diamond.com ofdiamond.com in the GoDaddy as well

Athif Shaffy: Yeah.

Deepshika Ghale: if they want or even the or the OVH can provide the domain as well right if needed. And then he was like it's fine because we already have roughtime.com so we would like to have it under our own system like under GoDaddy

00:01:29

Athif Shaffy: Yeah.

Deepshika Ghale: parts.

Athif Shaffy: Yeah. Yeah.

Deepshika Ghale: So yeah this will be done from their

Athif Shaffy: So uh yeah but I mean just

Deepshika Ghale: end.

Athif Shaffy: for information OVH is providing the hosting they don't pro I don't think they provide the domain and all so yeah but

Deepshika Ghale: Okay this will okay this will be done

Athif Shaffy: yeah

Deepshika Ghale: from

Athif Shaffy: so if domain name is done SSL and everything is also going to be

Deepshika Ghale: Okay.

Athif Shaffy: Okay.

Deepshika Ghale: Um, all of this and then for this one also we don't have to pay anything, right? Because it's 000 in here. You just wanted to confirm that.

Athif Shaffy: Yeah.

Deepshika Ghale: Then even for this, we don't need anything. And then GitHub private repository free at our scale. Uh I just like you had suggested I created from my own rough

Athif Shaffy: Yeah.

Deepshika Ghale: diamond rough diamond email but Andreas and I mentioned

Athif Shaffy: So,

Deepshika Ghale: the same to him that I created with my rough diamond email.

00:02:42

Deepshika Ghale: Then he was like, uh, maybe we can create a new email address called part

Athif Shaffy: H.

Deepshika Ghale: parts@druffdiamond.com and you can use that email, but it would be like a segregated email just for just to be used. Poly parts portal. Uh so yeah,

Athif Shaffy: Yeah,

Deepshika Ghale: time one

Athif Shaffy: that makes sense.

Deepshika Ghale: by one and email two. What the hell? Why no? Interesting. And those things not on this one. Yeah. So he marked this one as no will not use this one. All right. Oil and horse line machines. No, he didn't have anything on this one. Nothing on this one. Playing terms. Yeah, the same discussion in this one as well. And then for zero he was suggesting and suggested phase three or for

Athif Shaffy: Okay.

Deepshika Ghale: zero.

Athif Shaffy: So what is requirement in phase one?

Deepshika Ghale: Phase one is develop the ports parts portal.

Athif Shaffy: Okay. Can you explain?

00:05:09

Athif Shaffy: Yeah, go ahead. You have to explain your password for main list.

Deepshika Ghale: The same thing. You remember the parts speed like the instruction PDF that I had sent to you earlier?

Athif Shaffy: There's too many stuff. You can resend it. Maybe maybe you can make some document Google doc to all the like uh documents and like put them there.

Deepshika Ghale: Okay, we'll see. We'll see.

Athif Shaffy: make a folder and then put this stuff there.

Deepshika Ghale: Okay, we'll

Athif Shaffy: And you can put artifact like I recently bought uh Gmail

Deepshika Ghale: see

Athif Shaffy: one.

Deepshika Ghale: what it is built with.

Athif Shaffy: hand

Deepshika Ghale: That is all. free. So, he just wanted to ask if we have to pay for any of those stuff, but we don't have to, right? Yeah. So that's

Athif Shaffy: if you're saying pause then

Deepshika Ghale: why do not uh two copies of the portal portal change rather than dedicated design status. Yeah, no discussion on this one.

00:06:42

Deepshika Ghale: customer experience design build change management database structure. So yeah, he was talking about something in here. He just had question on each one of those like is it going to be the catalog? What is going to be stored in the database in the catalog and that is what it was. So I told him, yeah, it's a high level

Athif Shaffy: So what is going to be the low level thing?

Deepshika Ghale: thing.

Athif Shaffy: I mean yeah maybe you should show me the parts thing again.

Deepshika Ghale: Okay, this one. Yeah, for the mapping thing he we were discussing about uh the way to search for the part. So one of the medium is part number, one is the another one is the model and he was also talking about the description but I told him that with the description it might be a bit complicated because most of the wordings for the model is going to be same

Athif Shaffy: Yeah.

Deepshika Ghale: same not same but similar. So if we want to have the exact part that we're looking for then part number and model would be better.

00:08:18

Deepshika Ghale: Uh that's how we had Yeah. And there could be a scenario where two or more brands can have the same part number. And in that scenario when the admin enters the data and when the user or dealers searches using the part number it should show them the message that we have the part with the same part number. Uh like example would be when admin enters the data he can ask we have the same part number how would you want to differentiate it? Even the two brands can have the same part number but the different impacted there could be two brands right. So yeah. So and when dealers tries to search through the part number but if the dealer is looking for the part

Athif Shaffy: Yeah,

Deepshika Ghale: from the agile brand then they can just be like we can show up our message telling them that okay the same part number we have two different brands so which one are you willing to purchase. So yeah, that was the part and another one was price uh price he wanted it to be shown in three different currencies.

00:09:42

Deepshika Ghale: One was USD and another one was Sweden one.

Athif Shaffy: And there people

Deepshika Ghale: they could expand because right now it's even in Canada it's just Northern Ontario USD and SDK and for the pricing they want to have uh the update in the prices for that specific part. For example, if in the start date when the product was when the part was added, let's say the product cost \$100 and then the second time when the price update comes in, it costed them it costs them \$120 and

Athif Shaffy: Yeah.

Deepshika Ghale: then on the another update it could be 160 \$170. So it's like the margin increases. So at that point of time they want to have like an analysis on what like the price hike by this percentage of for this specific part kind of stuff. So that's how this start date and end date. And then he did not want this one but

Athif Shaffy: Okay.

Deepshika Ghale: this is something that came in the CSV file of the detailed CSV file

Athif Shaffy: Okay.

Deepshika Ghale: that they had given us.

00:11:12

Deepshika Ghale: So, Intello Intel catalog they have this one but even Andreas doesn't know what this specific column is about. So, yes, it's like we can have it but it does there is no significance to it. Okay.

Athif Shaffy: change.

Deepshika Ghale: The number tell us data migration all this kind of stuff.

Athif Shaffy: I need to read everything. I mean that was AI generated again.

Deepshika Ghale: I read it.

Athif Shaffy: I can't remember the

Deepshika Ghale: You did not read. I even asked

Athif Shaffy: Yeah.

Deepshika Ghale: you

Athif Shaffy: I can't remember the like when was the last time we were Can you go up? Like you can see the comments. It was like one or two months ago. Yeah, it was up

Deepshika Ghale: July

Athif Shaffy: September.

Deepshika Ghale: go access trigger cyber security. Yeah. What is this accidental damage from our own site such as an incorrect bulk update for a deletion in practice most likely to cause on a bad day and also the EGS recovery from them.

00:12:35

Deepshika Ghale: So from our own side it's like updating wrong data kind of

Athif Shaffy: Yeah, deleting production

Deepshika Ghale: stuff

Athif Shaffy: with

Deepshika Ghale: because the second line in practice is most likely cause of a bad day and also the easiest to recover from.

Athif Shaffy: I mean, I think it's saying like if we mistakenly delete something

Deepshika Ghale: Okay. Yeah. A little more description on these ones and these ones. Incident response. The response sequence is contain the incident. Establish what? Contain the incident. Establish what was reached and when. Reset affected credentials. Restore from unknown good backup taken before the incident. Close the gap that allowed it. Document what happened and notify anyone whose information was involved where required. Privacy law requires notification where personal data is affected and customer contact details count. The party responsible for responding should be named before the portal goes live rather than identified during an incident. This thing

Athif Shaffy: Yeah. I mean, if there's a cyber security incident

00:14:07

Deepshika Ghale: but we wanted to be under understandable for the general user as well. No general user is going to understand on how they should respond to such kind of incidents, right?

Athif Shaffy: Yeah, it's not uses I mean we have to find out the use stuff and yeah

Deepshika Ghale: So

Athif Shaffy: but yeah maybe I can write some more

Deepshika Ghale: need more

Athif Shaffy: stuff.

Deepshika Ghale: this deep. Okay. Backup and recovery. OVH provides backup facilities directly and these form the first layer. The second independent layer is because of the specific limitation premium.

Athif Shaffy: So only Andreas was there today for the meeting.

Deepshika Ghale: Yes. posting. Yeah. And he also wants to have I think it is included in the thing as well, but she also wants to have the tutorial

Athif Shaffy: Now that is

Deepshika Ghale: instruction document stuff for the users to

Athif Shaffy: simple.

Deepshika Ghale: use or place the order as Uh yeah, that was it. Uh so this is how much it is going to cost if they use the OV cloud yearly for yearly for portal.

Athif Shaffy: Oh,

Deepshika Ghale: Right?

Athif Shaffy: yeah.

Deepshika Ghale: So if we have to get an exact number of how much it is going to cost the employer and if we contact OVH for that would we be able to get it because they want the exact number.

Athif Shaffy: Yeah. Yeah. We can go there.

Deepshika Ghale: Can you do that?

Athif Shaffy: Yeah.

Deepshika Ghale: Okay, that was all. Any questions?

Athif Shaffy: Uh I will check and let you know.

Deepshika Ghale: Okay.

Athif Shaffy: You want me to check OVH?

Deepshika Ghale: Do you

Athif Shaffy: Uh so maybe I can share a screen download

Deepshika Ghale: want?

Athif Shaffy: dropbot I can quickly show you maybe it's useful for like you're doing many stuff right share screen you don't

Deepshika Ghale: What?

Athif Shaffy: mind I can uh maybe I
